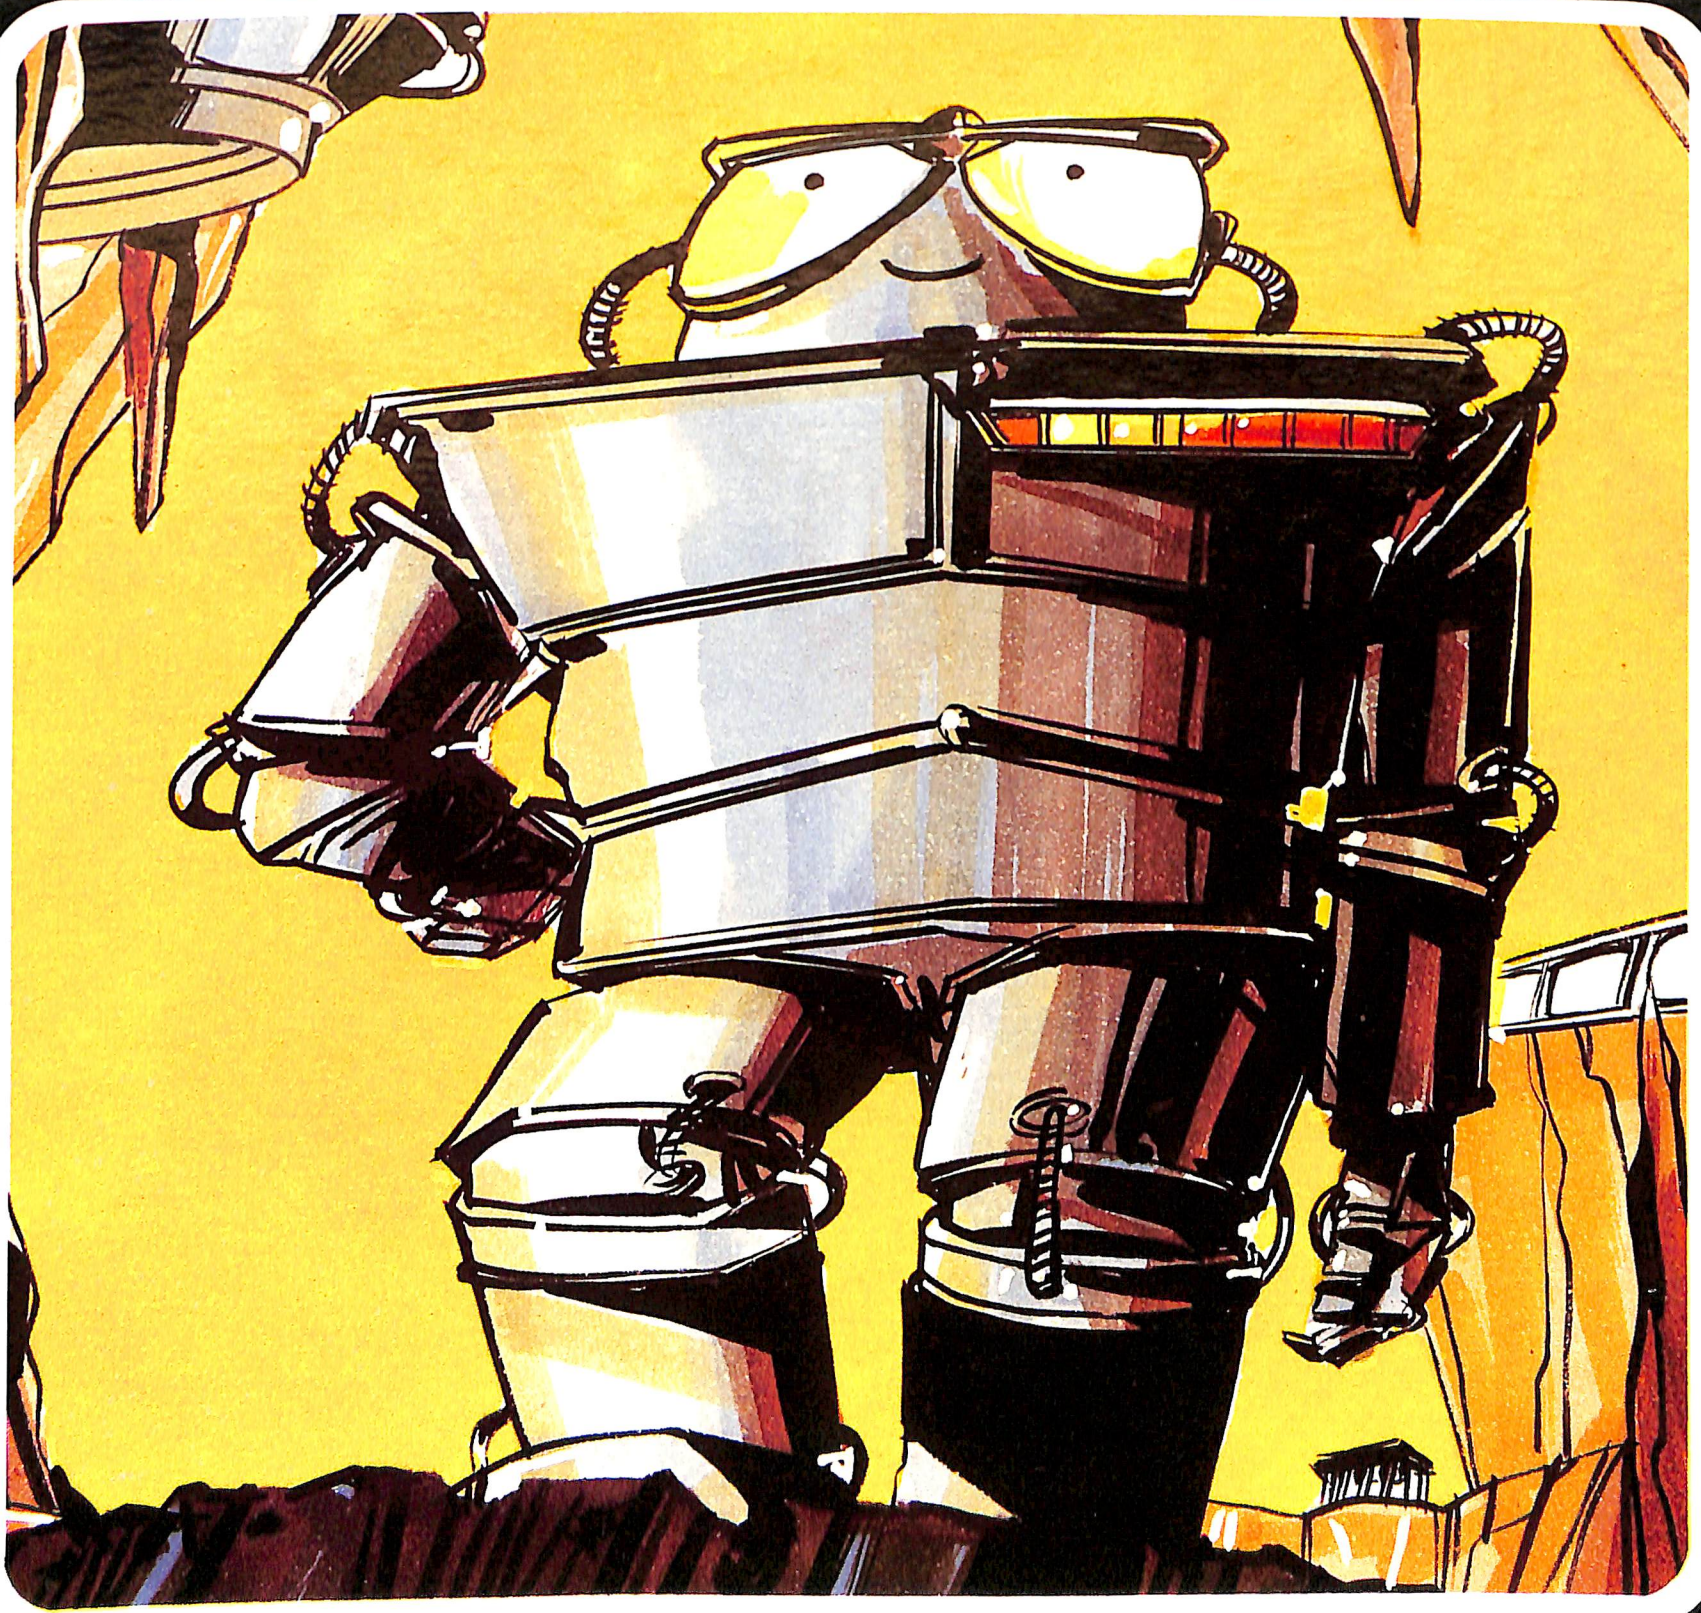
START PROGRAMMING WITH

GORTEK AND THE MICROCHIPS



commodore

This delightful and unique concept in teaching young people to program couples a space adventure story with lessons in BASIC programming.

The planet of Syntax is being invaded by fearsome Zitrons! Gortek is working furiously to teach the Microchips to program the great computer to ward off the attack. The full colour story book of this adventure incorporates the Microchips Training Manual that will teach your child the fundamentals of programming in BASIC. They too, can help stop the Zitrons.

The book which includes eleven imaginative illustrations in vivid colours, is accompanied by two cassettes containing educational games and other programs. In addition to using the programs provided, throughout the training manual there are programs to be typed into the computer by the "trainee". At the end of the story the great computer "Creativity" is saved by the programming that your child and the Microchips have learned from Gortek. Successful trainees earn the right to wear the Gortek badge which comes in the package.

The innovative approach to computer education and the space adventure story with which it is interwoven is the creation of three English school teachers. They designed the package for 10 to 13 year-olds although it is suitable for younger children with parental assistance. Older children and even adults will find it informative and fun as well. The package which is the first in a series is marketed exclusively by Commodore, worldwide.

Package includes:

44 page book (38 pages in full colour plus answers)
2 cassettes containing 12 programs
A Gortek Badge
